

HALO Smart

Professional Laboratory Grade Air Purifiers

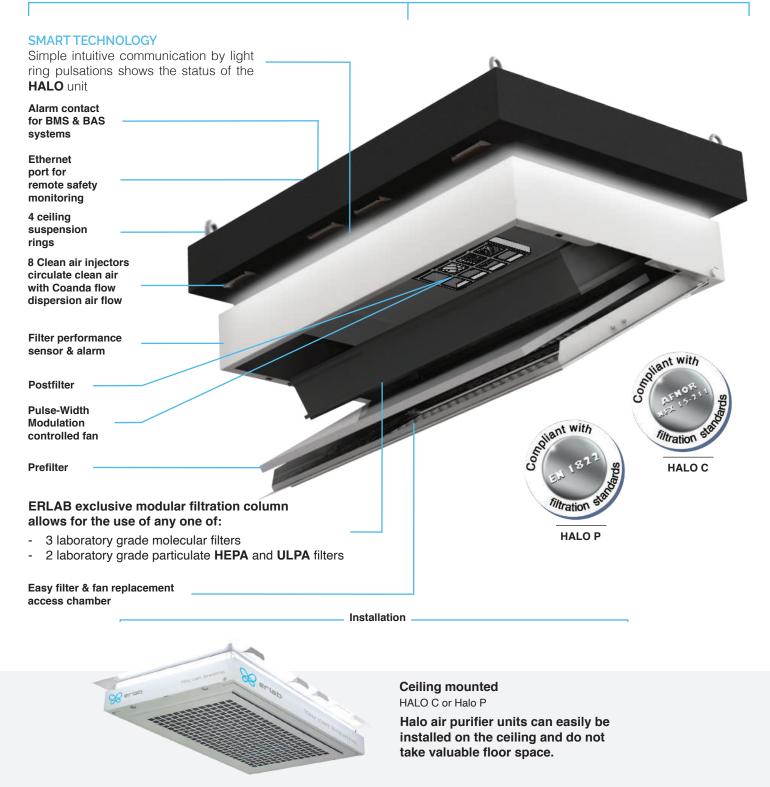

Filtration of Gas, Viral & Bacterial Pollutants

- Autonomous filtration unit no HVAC connection required
- Real time room and system monitoring technology
- Fast and simple to install
- Does not take floor space
- Very low energy consumption (50w)
- Captures chemical emissions and aerosolized contaminants at the source
- Zero release of pollutants to atmosphere
- Intuitive Smart light
 communication
- Remote management by app
- Alarm contact for BMS and BAS systems

HALO Smart purifiers guarantee laboratory grade air quality by filtering all gas, viral and bacterial pollutants at the source. **HALO Smart** purifiers deliver a high level of air quality without having to rely upon central HVAC systems while generating substantial energy savings. All **HALO** units comply with the most stringent professional molecular and particulate laboratory air filtration quality standards.

Simpler to use, safer to operate

Decontaminated air

HALO SMART reduces propagation of all chemicals, viruses, and bacterial pollutants. The Halo works with two filter types, carbon filtration powered by Neutrodine technology ®, and Particulate HEPA H14, or ULPA U17 filters. The Carbon filter *adsorbs* toxic chemical emissions present within the ambient air (compliant with AFNOR NF X 15-211 laboratory grade molecular filtration safety standard), while the HEPA/ULPA filter *absorbs* viruses, allergens, and bacterial pollutants. A combination of Halo's can be installed in any room to provide optimal protection and a cleaner environment, so you can breathe.

In order to offer the best particulate filtration technology, we have equipped our **HALO HEPA** purified air units with a **HEPA H14** laboratory grade particulate filter or when necessary a **ULPA U17** particulate filter for the most critical health risk situations.

According to **EN1822** particulate filtration standard our **HEPA** and **ULPA** offer a very low particulate penetration factor and can achieve dust free air filtration efficiency of 99.999995% which is 10 to 1,000 times more powerful than common air purifier units found on the market.

These filters are designed for the most complex sanitary situations. They efficiently and significantly reduce the propagation of all airborne viral and bacterial pollutants. These types of filters are found in clean-rooms and in all laboratory grade microbiological safety cabinets for the safe handling of pathogenic microorganisms.

HALO C and HALO P are all equipped with a:

- Prefilter
- Postfilter (HALO Carbon only)
- VOC, Formaldehyde or Chemplus laboratory grade carbon filter compliant with molecular filtration NF X 15-211 standard offering a wide gas filtration efficiency spectrum. (HALO Carbon only)
- Dedicated air quality sensor. (HALO Carbon only)
- HEPA or ULPA laboratory grade particulate filter compliant with particulate filtration EN 1822 standard offering filtration efficiency of up to 99.999995% offering an efficient capture of all viruses and bacteria. (HALO P only)
- Pulse-Width Modulation controlled fan allowing for a 220 to 300 m³ per hour or 130 to 175 CFM of air treatment. We recommend one HALO C unit for every 25 m² or 270 ft² of space, or one HALO P unit for every 35 m² or 375 ft² of space.

solutions.

Energy savings & air safety

Installing a **HALO Smart** in a lab, office or classroom will ensure a high level of air quality without having to rely upon heavy air renewal systems or HVAC which can redistribute chemical or biological airborne pollutants throughout a building. Additionally, by constantly filtering the air in the room, without releasing it back to the atmosphere, substantial energy savings can be achieved.

gas sensor.

Easy to install - 24/7 - does not take floor space

pulsations.

HALO Smart air purifier units can easily be installed on the ceiling and do not take up valuable floor space unlike other air purifier units on the market. They are directly connected to the building's main powerlines and therefore cannot be accidentally unplugged. **HALO** units are designed to run quietly 24/7 and contribute to a significant level of air treatment per minute or hour .

Smart: be informed

HALO Smart air purifier units are all equipped with **SMART Technology**. This technology allows for a simple and intuitive communication by light interface which informs every user of their level of protection. Through light pulsations room occupants can be informed in real time about the performance and status of every **HALO** unit.

Go further and download the **eGuard®** App and monitor every **HALO** unit, change settings while receiving safety alerts immediately on your mobile, tablet or PC device.

Specifications

	Gas / vapors			Particulates / Aerosols		
	VOC	Formaldehyde	Chemplus	HEPA	ULPA	
		HALO C		HAL	-0 P	
External width (mm / in)	592 / 23.25			592 / 23.25		
External depth (mm / in)	892 / 35.25		892 / 35.25			
External height (mm / in)	260 / 10.25		303 / 12			
Air flow (m3/h / CFM)	220 m³/h / 130 CFM		300 m³/h / 120 CFM			
Safety Standards :		AFNOR NF X 15-211:2009 : France BS 7989 : England DIN 12 927 : Germany EN 1822 : 1998 (HEPA H14 & ULPA U17 Filters) CE Marking UL Listed				
Voltage / Fre- quency (V/Hz)		80-240VAC 50/60Hz		80-240VAC 50/60Hz		
Power consumption	50 Watt		50 Watt			
Operating mode	24/7, day / night, Alerts					
Ceiling mounted		Hung via 4 eye bolts (included)		Hung via 4 eye bolts (included)		
Weight (kg/lbs)		31 kg - 68 lbs (filter included)			31 kg - 68 lbs (filter included)	
Protected surface (m ² / ft ²)	25 m² / 270 ft²			35 m² / 375 ft²		

Features

Communication interface	Simple communication by LED pulsations: fan settings, usage timer, fan failure, automatic filter performance detection			
eGuard® app	App for remote control to monitor HALO units, change the settings, and deliver safety alerts immediately to your devices (mobile, tablet and PC).			
Connectivity	RJ45 ethernet cable connection			
Filter perfor- mance sensors	Semiconductor for VOCs	Electro-chemical sensor for Formaldehyde	Semiconductor for a wide array of pollutants	Timer Based

Options

Carbon filtration for gases and vapors	AS : For organic vapors	F : For formaldehyde vapors	BE+ : For organic vapors and acid vapors	(N	/A)
Particulate filtration for powders	(N/A)			HEPA H14 filtration efficiency: 99.995 % according to MPPS method, EN1822 standard	ULPA U17 filtration efficiency: 99.999995 % according to MPPS method, EN1822 standard
Prefilter	Particulate filter			Particulate filter	
Postfilter	Particulate filter			(N/A)	

Structure

Metallic frame	Anti-corrosion steel coated with 100% polyester		
Filtration module	Injected polypropylene	Aluminum
